

Ringling College of Art + Design

Rapid-Trace is pleased to announce it is partnering with the Student Health Center at Ringling College of Art and Design to support contact tracing on campus. Rapid-Trace will work closely with the Student Health Center, Sarasota Memorial Hospital, and with the Sarasota County Department of Health to augment and execute contact tracing protocols.

Rapid-Trace specializes in contact tracing services for academia, corporations, and government entities. Contact tracers at Rapid-Trace have all completed the Johns Hopkins COVID-19 Contact Tracing course and are trained on adherence to CDC guidelines, HIPAA rules and procedures, Sarasota County policies, cybersecurity, and data management. Rapid-Trace observes strict protocol regarding confidentiality and data security.

In collaborating with Ringling College, Rapid-Trace's role is to identify and inform those who may have been exposed to a COVID-19-positive person. Contact tracers will guide COVID-positive individuals to appropriate health resources and isolation and swiftly notify contacts in order to assist with their symptom reporting and self-quarantine. Rapid-Trace works closely with Ringling College to provide contacts with support for testing, vaccinating, and medical care, if needed.
